Introduction

The New Mexico Statistical Abstract, 1979-1980 is a continuation of the first edition of a statistical abstract for the State issued by this Bureau in 1970. The 1979-1980 edition updates much of the information provided in that first edition.

The Abstract contains 123 tables and 9 maps grouped under 20 major subject headings. Historical coverage varies among the tables, providing the user with essential information, while avoiding overcomplication of the material. In addition, each of New Mexico's 32 counties is profiled.

Sources of the data are identified in footnotes accompanying each table. Compilations by numerous agencies of the State of New Mexico have contributed importantly to this record, including most especially figures developed by the New Mexico Employment Security Department, the Taxation and Revenue Department, and the Departments of Human Services, Education, Agriculture, Highway, and Criminal Justice. Publications of federal agencies also have been used, including data from the Bureau of the Census, the Department of Agriculture, and the Bureau of Indian Affairs. In addition, privately developed reports have been employed from companies such as Dun & Bradstreet, Inc., and McGraw-Hill, Inc.

It is our hope that the series contained in this new Statistical Abstract will prove useful. The Bureau has long been recognized as the primary source of such information in New Mexico. In order to continue fulfilling that role effectively, we will, within our limited resources, continue to modify our program to better serve New Mexico citizens and other persons interested in the State.

COLLEGES AND UNIVERSITIES IN NEW MEXICO

College of Santa Fe
President: Brother Cyprian Lake
Saint Michaels Drive
Santa Fe, NM 87501

College of the Southwest
President: Dr. Bruce M. Evans
Lovington Highway
Hobbs, NM 88240

Eastern New Mexico University
President: Warren Armstrong
Portales, NM 88130

Roswell Campus
Dean: Mr. John C. Gillis
P.O. Box 6761
Roswell, NM 88201

Institute of American Indian Arts
President: Mr. Lloyd H. New
1300 Cerrillos Road
Santa Fe, NM 87501

New Mexico Highlands University
President: John A. Aragon
Las Vegas, NM 87701

New Mexico Institute of Mining &
Technology
President: Dr. Kenneth W. Ford
Socorro, NM 87801

New Mexico Junior College
President: Dr. Jodie C. Smith
Lovington Highway
Hobbs, NM 88240

New Mexico Military Institute
President: B Gen. Gerald R. Childress
Roswell, NM 88201

New Mexico State University
President: Dr. Gerald W. Thomas
Las Cruces, NM 88003

Alamogordo Branch
Director: Marvin C. Rohovec
Box 477
Alamogordo, NM 88310

Carlsbad Branch
Director: Dr. Gary P. Sims
2900 W. Church Street
Carlsbad, NM 88220

Grants Branch
Director: Donaciano G. Gonzalez
P.O. Box 906
Grants, NM 87020

San Juan Branch
Director: Dr. James C. Henderson
4601 College Boulevard
Farmington, NM 87401

Northern New Mexico Community
College
President: Frank A. Serrano III
General Delivery El Rito Cam.
El Rito, NM 87530

University of Albuquerque
President: Dr. Lawrence Smith
Saint Josephs Place NW
Albuquerque, NM 87140

University of New Mexico
President: Dr. William E. Davis
Albuquerque, NM 87131

Gallup Branch
Director: Calvin O. Hall

p. Provisional.

1. Less than 50 persons.

2. Births and deaths are based on reported vital statistics from April 1, 1970 to December 31, 1977 with extrapolations to June 30, 1978.

3. Net migration is the difference between net change and natural increase.

**PERCENTAGE OF POPULATION 65 YEARS OF AGE OR OVER BY COUNTY
1970**

-  More than 50 percent above state average
-  Above state average by 50 percent or less
-  Less than state average

Of the total state population, 6.9 percent is in the 65 or over age group.

- 1 Total acreage administered by designated agencies. Acreage of Federal reservoir areas under lease to State and local agencies are included in acreage administered by these agencies. County and municipal acreage is that reported to State Planning Office. Some municipalities and counties did not report.
 - 2 State and Federal acreage developed for recreation not including water surface. Acreage for municipalities and counties includes both land and water surface where there are developments for outdoor recreation.
 - 3 Acreage in National Monuments, State Parks, and State Monuments classified as historic and cultural sites by administering agencies.
 - 4 Acreage in designated Wild and Wilderness areas of National Forests and acreage so classified by National Park Service and Bureau of Sport Fisheries and Wildlife. County acreage not available.

Bernalillo

Bernalillo County, located in the central portion of the state, is bisected by the Rio Grande and bounded on the east by the Sandia Mountains. Although the second smallest in land area, Bernalillo is New Mexico's most populous county in which almost one third of the state's population reside. Most of the population is concentrated along the Rio Grande in Albuquerque, the state's largest city. By New Mexican standards, the Albuquerque economy is diverse, although it is still heavily reliant on governmental expenditures to such institutions as Kirtland Air Force Base, Sandia Laboratories, the University of New Mexico, and the Veterans Hospital. Albuquerque is the center of transportation, wholesale and retail trade, finance, and medical service within a 265-mile radius. Tourism and light manufacturing also contribute to the county's economic base.

Catron

Catron County is centrally located on the state's western border in the heart of some of the most spectacular country in the southwest. The terrain consists predominantly of mountains and high mesas with extensive plains regions in the north and east. Largely undeveloped, the county is New Mexico's largest and most sparsely populated. There were no incorporated communities in Catron as late as 1974, when the county seat of Reserve incorporated with a population of 375. More than half the land area is designated as one of three national forests: the Gila, Cibola, and Apache. A portion of the Gila Forest was declared wilderness in 1924, making it the oldest declared wilderness in the U. S. The county's economic base is largely confined to cattle ranching and government employment. Like many other rural New Mexican counties, population is gradually declining because of consistently low incomes and high rates of unemployment.

Chaves

Located in the southeastern quadrant of the state, Chaves County is New Mexico's fourth largest county in land area. The county is relatively low in elevation, its terrain varying from flat land to rolling hills. The Pecos River roughly bisects the county from north to south, forming the major watershed. The county seat, Roswell, is the major population center with a 1976 population of 38,455. Prior to the 1968 closing of Walker Air Force Base in Roswell, much of the county's economy was based on federal expenditures. Subsequently, agriculture, manufacturing and mining (petroleum and natural gas) have become the mainstays of the area's economy. Roswell's position as a regional trade and service center also contributes to the county's economic base. The county is well suited for growing cotton, but hay and cattle feed have become the primary crops because of the expansion of feedlot operations in Roswell. Many of the abandoned air base buildings have been converted to light manufacturing facilities; others have been employed to establish a branch campus of Eastern New Mexico University. The New Mexico Military Institute is also located in Roswell.

Colfax

Bordering Colorado, Colfax County incorporates both mountains and high plains with altitudes ranging from 5,800 to over 12,000 feet. Mining, particularly coal, has long been the major income-producing activity in the county. Since coal mining activity peaked between 1915 and 1920, Colfax County has faced a declining economy and population. There seems to be some recent reversal in this trend, possibly because of rekindled emphasis on coal as an energy source. Between 1920 and 1970 the population fell from 21,550 to 12,170, but preliminary estimates set the 1978 population at 12,800. Cattle and hay production as well as manufacturing and tourist-related activity are also important components of the county's economy. Local tourist attractions include the Philmont Scout Ranch, the National Rifle Association's Outdoor Center, several ski areas, and La Mesa Park, a horse race track located in Raton. Raton is the county's largest community and seat of the county government.

Curry

Located on the Texas-New Mexico border, the landscape in Curry County consists of flat farm and grass land interrupted by occasional rolling hills. The farmland typically produces more wheat, corn, and feed sorghum than any other county in the state. More economically significant than the croplands are the county's feedlots, the largest of which is located at Clovis. Clovis, also the county seat, is the major population and trade center for east-central New Mexico and parts of Texas. Cannon Air Force Base, near Clovis, is the most important single source of personal income in the county. Manufacturing, although not confined to, is dominated by the cattle feed preparation and meat packing industries.

De Baca

Located in the east-central region of New Mexico, the landscape of De Baca County consists of rolling plains and mesas divided from north to south by the Pecos River. The economy of the county is based almost wholly on the livestock industry. Consequently, personal income is closely related to cattle prices which are subject to substantial fluctuation. In addition to agriculture, some income is generated in the Trade, Services and Government sectors. Fort Sumner, with a 1976 population of 1,712, is the county seat and the only incorporated place in the county. The town is named after an old fort which housed the military from 1862 to 1869 in order to oversee some 7,000 Navajos who were interned nearby.

Dona Ana

Dona Ana County has the second largest population in New Mexico and is the sixteenth largest in land area. Situated in the south-central portion of the state, it has a common border with both Texas and Mexico. The El Paso-Juarez metropolitan area lies just across the border. Agricultural and population centers are located along the Rio Grande, which traverses the county from the northwest to southeast corner. Crop production is an important aspect of the Dona Ana economy, particularly cotton and vegetables (lettuce, onions, chili, and tomatoes). Outside of the Rio Grande Valley, most of the county is sparsely populated, semiarid flat and low mountain land suitable only for ranching. In addition to agriculture, Dona Ana derives substantial economic benefit from federal expenditures associated with the White Sands Missile Range near Las Cruces and New Mexico State University, the state's second largest university located in Las Cruces. The county is served by two major interstate highways, Interstate 10 and Interstate 25 which intersect at Las Cruces, the state's third largest city and county seat.

Eddy

Eddy County is located near the southeast corner of the state, bordering Texas on the south. The Pecos River crosses the county from north to south and enters Texas at the lowest elevation in New Mexico (2,841 feet). The river has been dammed at several points in the county forming various reservoir lakes. Irrigated land in the Pecos Valley produces hay and cotton, but most of the county is semiarid brush and grassland suitable only for cattle ranching. Mining of potash, oil, and gas provides the principal source of income in the county. Tourists visiting Carlsbad Caverns National Park and the Lincoln National Forest also contribute to the economic base. Carlsbad, the most populous community and county seat, has recently commanded national attention as the potential location of the Waste Isolation Pilot Project (WIPP), a proposed national radioactive materials dump near the city.

Grant

Grant County, bounded on the west by the Arizona border, is situated in the southwest quadrant of the state. The terrain consists of mountains with occasional rolling flat lands. The source of the Gila River and its tributaries is located in the mountainous north-central region of the county and flows into Arizona. Portions of the Gila National Forest and Wilderness Area, the oldest designated wilderness in the U. S., occupy approximately one-third of the county's total area. Metal mining, particularly copper, has dominated economic activity for more than 150 years. Significant amounts of silver, gold, lead, zinc, and molybdenum are also mined, but open-pit copper mining, milling and smelting are the most important income-producing activities in the county. Ranching, tourism, and governmental expenditure also contribute to the economic base. Silver City, the county seat and largest community in Grant County, is the site of Western New Mexico University.

Guadalupe

Guadalupe County is located on the east-central plains of New Mexico. Like other surrounding counties, the terrain consists mostly of flat grassland and brushland interrupted by small hills and mesas. The Pecos River crosses the county from the northwest to the southeast before flowing into Alamogordo Reservoir just south of the Guadalupe-De Baca County line. Santa Rosa, the largest community and county seat, lies on Interstate 40, about halfway between Albuquerque and the state's eastern border. Servicing travelers on Interstate 40, Santa Rosa's motel-restaurant businesses provide the county's chief source of personal income, but cattle ranching is also an important activity. Guadalupe tends to be one of New Mexico's poorer counties, partly because of the traditionally low wages associated with the Trade, Services and Agriculture sectors.

Harding

Located in northeastern New Mexico, the landscape of Harding County consists of vast plains and mesas bounded on the east by the steep-sided Canadian River Canyon. Personal income in the county is derived almost exclusively from cattle ranching which varies substantially from year to year. State and local government expenditures and the Trade and Services sectors also contribute to the economic base of the county. Harding has been losing population since its creation in 1921 when approximately 5,000 people lived in the county. Based on the 1978 estimated population of 1,200 people, Harding is the least populous and the second least densely populated county in the state.

Hidalgo

Bordering Arizona and Mexico and located farther south than any other New Mexico county, Hidalgo County forms the southwestern corner of the state. The terrain varies from semiarid plains, dotted with extensive alkali, flat and playa lake regions, to rugged mountain ranges with elevations ranging from 3,700 to 8,500 feet. The economy of Hidalgo County is tied historically to the travel service industry. Travellers came first by stage coach, then by railroad, and now by interstate highway. Interstate 10, crossing the northern third of the county, is a major east-west transcontinental thoroughfare, particularly when winter creates hazardous driving conditions farther north. Agriculture, especially cattle ranching, is another traditional mainstay of the county's economy, but copper refining has recently become important economically because of the location of the Phelps-Dodge Hidalgo Smelter near Playas. Lordsburg, located on the rail line and Interstate 10, is the most populous community and county seat.

Lea

Forming the southeastern corner of the state, Lea County shares its borders with Texas on the south and east. The terrain is characterized by vast grassy plains and brushlands dotted with numerous playa lakes. One of the more prosperous counties in the state, Lea's income is derived chiefly from the production of oil and natural gas. In 1974 Lea County accounted for more than one-third of the value of all minerals and more than two-thirds of all the petroleum produced in the state. Cattle and crops also play a major role in the county's economy. Because of the capital-intensive nature of mining and agriculture, employment opportunities have declined steadily in these two sectors for years; however, recent energy developments have encouraged renewed exploration activities and boosted employment. While Lovington is the seat of county government, Hobbs is the largest community in the county with nearly 30,000 people.

Lincoln

The Jicarilla and Capitan Mountains separate the plains lying to the east and west of them in centrally located Lincoln County. A relatively recent lava flow, known as malpais, covers much of the southwestern corner of the county. Part of this area has been designated as Valley of the Fires State Park. Lincoln is best known for its range wars waged in the late 1870s for political and economic dominance of this region. Cattle ranching which dominated the local economy was at the heart of the dispute. Ranching continues to be important today, but the recreation-tourism industry has surpassed it as the principal source of income. Parts of two national forests, a ski resort, a horse racing track and a motel-restaurant-resort complex draw tourists and provide most of the jobs in the county. Ruidoso is the largest community, but Carrizozo is the seat of county government.

Los Alamos

Situated in the Jemez Mountains, the landscape of Los Alamos County consists of relatively high mountains and plateaus intermittently cut by deep canyons. New Mexico's smallest county was created from parts of Sandoval and Santa Fe Counties during World War II to provide a secure and isolated location for the development of the world's first atomic bomb. Since the successful completion of the Manhattan Project, the emphasis of research conducted at Los Alamos Scientific Laboratory (LASL) has changed somewhat, but the concept of Los Alamos as a federal "think tank" has remained unaltered. More than 93 percent of the land in the county is held by the federal government, and the Government sector is directly responsible for three-quarters of all the jobs in the county and indirectly responsible for the remaining employment in retail trade, services and construction. Because of the county's unique economic base, residents generally have enjoyed the highest average incomes, the highest levels of education, and have been subject to the lowest levels of unemployment in the state. According to latest estimates, approximately 18,000 people live in Los Alamos County. However, there are no incorporated communities in the county.

Luna

located on the state's southern border, the terrain in Luna County consists of semiarid plains interrupted by scattered mountains. While cattle, cotton and sorghum are the traditional mainstays of the economy, manufacturing and tourism have recently come to play increasingly important roles. Additional support comes from the growing number of retired citizens wishing to take advantage of the warm and sunny climate. Deming, the largest community and county seat, is located on Interstate 10 which is a major east-west transcontinental thoroughfare, especially during the winter months when northern driving conditions are unpredictable and hazardous. Much of the economy of Deming, and in turn Luna County, relies upon the tourist-related establishments located along this route. Two major tourist attractions are Rock Hound State Park, a geologic phenomena, and Pancho Villa State Park, a historical site commemorating the famous Mexican revolutionary's raid on the border town of Columbus, New Mexico.

McKinley

Situated on the New Mexico-Arizona border, McKinley County lies on the southeastern portion of the Colorado Plateau with elevations ranging from 6,000 to 9,150 feet. The terrain varies from pine-forested mountain regions to the grassland and brushland of the lower mesas. Erosion has played an important part in shaping the landscape of this semiarid region exposing sandstone cliffs and cutting deep arroyos in the high mesas. Because portions of the Navajo and Zuni reservations are located within the county, more than 60 percent of the land is Indian-owned. McKinley is the only New Mexican county in which Native Americans are in the majority; more than 60 percent of the population is Indian. The economic base of the county is provided by the Mining, Government, Trade and Services sectors. McKinley is an energy-rich county producing uranium, coal, natural gas and petroleum. Mining activity has recently increased dramatically in response to national energy problems. The Government sector is also an important component of the county's economy because of the federal monies directed toward improvement of conditions of the Native American population. The tourist-related Trade and Services sectors form another important part of the McKinley economy, especially in Gallup, the largest community in the county.

Mora

The rugged, scenic Sangre de Cristo Mountains in the western portion of Mora County gradually level off to a high grassy plain. The eastern boundary of the county is formed by the steep-sided Canadian River Canyon; scattered peaks and ridges occasionally rise out of the otherwise flat plains. Large scale ranching operations on the plains constitute virtually the only nongovernmental revenue source in Mora, but these big ranches contribute little to the county's economy. Mora County has been experiencing declining employment and population, an erosion of its economic base, and low per capita income. Governmental expenditures constitute the principal source of income in the county, mostly in the form of transfer payments (Social Security and welfare), health, social services, and education. Wagon Mound, located on Interstate 25, is the largest community in the county with an estimated 1976 population of 674 people.

Otero

Otero County, located in the south-central portion of the state, is New Mexico's second largest county in terms of land area. The terrain varies from pine-forested mountains in the north and east to the semi-arid plains in the southwest. Elevations range from 12,000 to 3,600 feet. A lava flow extending south from Lincoln County covers much of the northwestern quadrant while the gypsum dunes of White Sands National Monument continue southward from the lava flow. The federal government owns 68 percent of the land, with another 11 percent in the Mescalero Apache Reservation. The federal government plays a major role in the county's economy through expenditures connected with the operation of White Sands Missile Range, Holloman Air Force Base and to a lesser extent the Mescalero Reservation and Lincoln National Forest. Tourist-related activity and light manufacturing contribute to the economic base. Alamogordo is the largest community and county seat.

Quay

Located in the north-central region of the state's eastern border with Texas, the landscape of Quay County generally consists of grassy mesas and rolling plains cut by numerous arroyos and canyons. The Canadian River which flows from west to east across the northern part of the county has been dammed to form Ute Reservoir, the most important tourist attraction in the County. Tourism is also relatively important to the Quay economy because of the county's proximity to Conchas Reservoir and the location of Interstate 40 which spans the entire width of the county. Despite the importance of tourist-related activities, the economy is largely dependent on agriculture and, consequently, income fluctuates substantially because of dependence upon weather and market conditions. Transfer payments and state governmental expenditures constitute another important source of income to county residents, 65 percent of whom live in Tucumcari. The railroad, once an important element of the Tucumcari economy, has been gradually replaced by the highway, first U. S. 66, now upgraded to Interstate 40.

Rio Arriba

One of New Mexico's larger counties, Rio Arriba borders Colorado on the north. The Continental Divide splits the county in a north-south direction. To the east are mountains, foothills, narrow river valleys and generally broken terrain. To the west, the foothills give way to a semiarid plateau characterized by high mesas, sheer sandstone cliffs and formations, dry washes and canyons. The San Juan River, dammed to create Navajo Reservoir, forms the northwestern boundary of the county. The Jicarilla Apache Reservation and a portion of Carson National Forest occupy much of the land along and to the west of the Divide. More than half the land is federally-owned. The Forest Service manages two wilderness areas and the national forests in which they are located. Economically, Rio Arriba is one of New Mexico's depressed, agriculturally based northern counties. The population, estimated at 28,200 in 1978, remains virtually unchanged from the 1940 level of 25,352. Government spending in the form of construction projects, transfer payments, and wages has surpassed agriculture as the most important source of personal income in the county. Tourism and some mining (petroleum and natural gas) provide additional economic activity.

Roosevelt

Roosevelt County is located near the middle of the Texas-New Mexico border in a region known as the Southern High Plains or the "Llano Estacado." A ridge or caprock running along the western border of the county also defines the western boundary of the Southern High Plains in many instances. From the caprock in the west where elevations average about 4,600 feet, a plain slopes gradually toward the Texas border where elevations average about 4,100 feet. As in most of the eastern counties, agriculture, particularly livestock production, is the predominant income-producing activity. However, substantial quantities of crops are grown on the county's irrigated farmland; the once-dominant cotton crop has now been replaced by grains (sorghum, wheat and corn) and peanuts. In addition to agriculture, government spending, mainly in connection with Eastern New Mexico State University, is becoming increasingly important. ENMU is located in Portales, the most populous community and seat of county government.

Sandoval

Sandoval County is located in the north-central portion of the state, bordering Bernalillo County on the south. The Rio Grande traverses the southeastern corner of the county entering through the narrow, precipitous White Rock Canyon. Below the canyon, the river is dammed to form Cochiti Reservoir, south of which the economic and population center of the county is located. The Jemez Mountains of the Santa Fe National Forest dominate the landscape of the northeast quadrant, while the terrain of the rest of the county mostly consists of semiarid, high mesas, dry washes, and arroyos. Economically, Sandoval County is one of New Mexico's depressed counties. This situation is gradually changing because a growing proportion of the county's population live in communities located near the Bernalillo-Sandoval County line and work in Albuquerque. In spite of this spin-off effect, however, the economy of the rest of the county remains much the same. Government provides the major source of personal income, augmented by logging and sawmill operations, ranching and mining. Indians, traditionally the most impoverished group in the U. S., comprised nearly 40 percent of the county's 1970 population.

San Juan

San Juan County forms the northwestern corner of the state, bordering Arizona, Utah and Colorado. This location, known as Four Corners, is the only place in the U. S. where four states meet at one point. Situated on the Colorado Plateau, extensive erosion has created the mesas, deep canyons, dry washes, protruding volcanic rocks and buttes which characterize the semiarid region. The San Juan River flows from Colorado to the Navajo Reservoir in the northern part of the county and eventually empties into the Colorado River. Nearly 10 percent of the land is held by the Navajo Nation and another 29 percent is federally owned. Mineral production, particularly coal, natural gas and petroleum, is the principal economic activity. As a consequence of recent energy developments, the county's economy is currently undergoing rapid growth accompanied by population increases. The massive reserves of low-sulfur coal located in the county are currently being tapped to generate electricity. Some plans call for much more extensive development of the field, possibly to supply plants converting the coal to natural gas. Although energy production is the cornerstone of the San Juan economy, government spending, tourism, and Farmington's position as regional trade and service center are also important to the county's economic base. As a consequence of recent developments in the energy field, the county is currently undergoing an economic and population boom. The population increased 42.5 percent between 1970 and 1978, which was the highest rate in New Mexico.

San Miguel

The terrain of San Miguel County varies widely from 11,800-foot peaks in the rugged Sangre de Cristo Mountains in the western portion, to broad, flat plains of less than 4,000 feet in the east. Between the mountains and the plains is another distinct region known as the Las Vegas Plateau, while Glorieta Mesa in the southwestern corner represents still another distinct zone. The sources of the Pecos River and its tributaries are located in the Sangre de Cristos and flow in a southeasterly direction. The Canadian River has been dammed to form Conchas Reservoir. Like many rural New Mexico counties, the economy and population of San Miguel have been gradually declining. Particularly hard hit have been the small communities in the west which depended upon subsistence farming and seasonal work. Agriculture has employed fewer people as production has shifted from crops to less labor-intensive cattle ranching operations. Government spending is currently the largest component of personal income, particularly state spending at Highlands University and the New Mexico State Hospital both of which are located in Las Vegas. Las Vegas, the largest community and county seat, is located on Interstate 25.

Santa Fe

The terrain in the southwest corner of Santa Fe County consists primarily of plains. The rest of the county can be characterized as mountainous, generally sloping westward from the lofty peaks of the Sangre de Cristo Mountains (elevation 12,600+ feet) in the east to the Rio Grande in the west. Santa Fe County is relatively prosperous in comparison with other northern counties. The City of Santa Fe, New Mexico's state capital, almost wholly dominates the county's economy. In turn, the city's economic well-being is related to state government and tourism. Unlike neighboring counties, employment opportunities have been steadily expanding in Santa Fe because of growth in state government. The county also has many tourist attractions including the Santa Fe National Forest and its Pecos Wilderness, Santa Fe Ski Basin, the Santa Fe Opera, the Santa Fe art community, Santa Fe Downs, and the unique tri-cultural character of the city. Santa Fe has been New Mexico's capital since the early 1600s and it is also New Mexico's second largest city with an estimated 1976 population of nearly 46,000.

Sierra

Sierra County is located in the southwest quadrant of the state. The Rio Grande, which bisects the county from north to south, lies at the base of a trough formed by parallel mountain ranges along the eastern and western borders. The river is dammed at two points within the county, forming two of the largest reservoirs in the state, Elephant Butte and Caballo. Gold and silver discovered in the western mountains led to original development, but the rich deposits were quickly depleted and the area largely abandoned. Now income is derived chiefly from the sizable retired community residing in Truth or Consequences, the largest town and county seat. Government spending and tourism, mostly associated with the county's two man-made lakes, are also important aspects of the Sierra County economy.

Socorro

The terrain of New Mexico's third largest county consists of semiarid plains interrupted by four mountain ranges. Socorro County is roughly divided by the Rio Grande along which virtually all the population is distributed in numerous small farming communities. Economically, the county reached its zenith around the turn of the century when wagon trains laden with ore mined from the surrounding mountains filled the streets of Socorro. Simultaneously, the livestock industry was thriving; Magdalena, a town located approximately 25 miles west of the river, was the largest cattle and wool shipping point in the state and one of the major stock centers in the country. By 1920, the mines were depleted, the cattle boom was over, and the economy gradually declined. Population in the county, however, has remained stable at about 10,000 since the early 1900s. The Socorro County economy is currently based chiefly on government spending, particularly state spending in connection with the New Mexico Institute of Mining and Technology. The location of the institute attests to the county's former prominence in the mineral industry. In addition, Interstate 25 which parallels the Rio Grande provides the county with some tourist-related income.

Taos

located centrally on the state's northern border, Taos County has some of the most spectacular scenery in New Mexico. The lofty peaks of the Sangre de Cristo Mountains in the east are set off by a broad high plateau occupying the central and western portion of the county. The Rio Grande traverses the plateau, twisting and tumbling through the deeply incised, walled canyon of the Rio Grande Gorge. The sources of numerous tributaries are located in the mountains which eventually join the Rio Grande to the west. Typical of New Mexico's northern mountainous counties, agriculture was once the chief source of income for the predominantly Hispanic population, but the shift to more capital-intensive farming techniques has virtually eliminated this source of income. Tourist-related activity currently provides one major source of income; attractions include the Carson National Forest, the Rio Grande Gorge, several ski resort areas, and the town of Taos' Pueblo and its highly reputed art community. Mining of molybdenum and perlite also contribute to the county's economic base.

Torrance

Torrance County is located in the central portion of the state, bounded on the west by the Manzano Mountains. The open rolling plains which dominate the remainder of the county are broken by scattered ridges and mesas in the south and east. Most of the county lies in one of three topographically closed basins, principally the Estancia Basin. Torrance is a rural county; no community in the county has more than 1,200 people. Its economy, once based almost wholly on agriculture, now is mostly dominated by state and local government spending. In the 1940s, Torrance was the pinto bean capital of the world. However, drought and weakening demand have almost eliminated the spotted bean as a cash crop. Potatoes have also been an important cash crop at times. Cattle raising now dominates the Agriculture sector. The county's population was relatively stable from 1910 to 1940 when it reached a peak of 11,026 but by 1970 the number had declined to 5,290. The 1978 estimated population of 7,400 indicates renewed activity and growth.

Union

Union County forms the northeastern corner of the state, bordering Colorado on the north, and Oklahoma and Texas on the east. High mesas, deep canyons and desiccated plateaus interrupted by occasional volcanic mountains define the terrain in the northwest portion of the county. Plains dominated the south and east, broken only by scattered hills and intermittent arroyos. The grassy plains are well suited to cattle ranching which directly or indirectly provides virtually all of the nongovernmental revenue and employment. Despite its heavy reliance on agriculture, Union County is relatively prosperous. Although income is subject to substantial fluctuation because of its dependence on range and market conditions, it is generally high. The number of unemployed persons is usually small despite declines in the number of available agricultural jobs. At least part of Union's prosperity is attributable to a consistently declining population; latest estimates indicate the population has shrunk to 5,200, or about one third of the 1920 level. Clayton, a town of about 3,000, is the county seat and major community in the county.

Valencia

Valencia County is located in the west central portion of the state bounded by Arizona to the west and the Manzano Mountains to the east. The Rio Grande, traversing the eastern tip of the county, flows through a valley formed by the Manzano Mountains on the east and a mesa on the west. The northern and northwestern portions of the county are fairly mountainous; much of this area is included in the Cibola National Forest. A lava flow lying east of the Continental Divide winds its way southward through the western third of the county. The economy of the eastern region and the western region of Valencia County differs. The population in the eastern region is concentrated along the flood plain of the Rio Grande. The economy here is largely dependent upon residents who commute to jobs in Albuquerque or work in the Santa Fe Railroad shops in Belen. In the west, the population is more diffuse and income is derived chiefly from uranium mining. The economy in the western part of the county is relatively unpredictable because it is directly related to demand for uranium which has fluctuated substantially during the last 25 years.
